STEP INTO THE FUTURE
OF REGULATORY
COMPLIANCE

MEET BOT.NERDIC

KNOW WHICH RULES YOUR TECH START-UP NEEDS TO COMPLY WITH

bot.nerdic is a chatbot that tells which technology related regulations your start-up needs to comply with, free of charge.

FIRST STEP INTO THE FUTURE OF COMPLIANCE

As true tech lovers, we see the future of regulatory compliance in Artificial Intelligence ("AI") and we are trying to develop AI tools that are more capable of satisfying your regulatory compliance needs.

WE BUILD TAILORED CHATBOTS TO SOLVE YOUR COMPLIANCE REQUIREMENTS TOO

bot.nerdic is a demo for you to see how a chatbot can be used to solve a specific compliance issue. We have many ideas to share with you to create solutions with chatbots for your business' compliance needs.

Hi!

Welcome to Nerdic's regulatory compliance assessment bot for start-ups.

I can tell you which regulations your business needs to comply with, in less than 5 minutes.

Would you like to start now?

SEND

Building a Compliance Chatbot for Your Business

PROBLEM

Identification of the problems that you are facing while complying with related laws and regulations in your organization.

SEARCH

Finding solutions for these problems considering technical capabilities of a chatbot and characteristic of its human respondents.

PILL

Having an integrated chatbot with a suitable conversation flow that works for solving the identified compliance problems.

PROBLEM

Identification of the problems faced through the regulatory compliance processes.

Why?

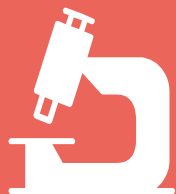

Compliance with related laws and regulations may require you to obtain customer consents, train your employees, have your vendors to sign waivers etc..

How?

Some of these needs can be more efficiently satisfied with the use of chatbots. Unlike other solutions, chatbots adopt to the way of human interaction rather than asking humans to interact with computer friendly interfaces such as forms, tick boxes etc.

What?

So, in order to identify the problems that can be solved with the use of chatbots, we'll work with your legal, compliance, marketing, IT and other related teams.

SEARCH

Finding suitable chatbot solutions for identified problems.

Why?

Chatbots are successful as long as they are task oriented and don't try to do all at once, carry the conversation with the right flow and tone of language, and are integrated with right sources of information .

How?

This can be achieved through consideration of the target audience of the bot and the language that they are using, compartmentalization of the problem, and determining right technical solutions for it.

What?

We'll build the conversation flow of the bot and determine its technical capabilities based on your needs as well as the results of our target audience research and A/B testing.

PILL

Having an efficient solution.

Why?

Chatbots are automated, scalable, omnichannel, easy to track/report solutions that are cheaper than live agents, and create better results compared to e-mail and text,

How?

As your respondents naturally converse with chatbots, retention rates and engagement levels are higher than conventional solutions.

What?

So, with the use of chatbots we can help your business to obtain data processing consents from your customers, train your employees on data security or anti-corruption, make your vendors provide information about receivables and deal with many other issues more efficiently.

A misty forest landscape with a white rectangular box containing the text "TRY BOT.NERDIC". The background is a dense forest of trees, with a thick layer of mist or fog hanging between the trees, creating a soft, ethereal atmosphere. The lighting is warm and golden, suggesting a sunrise or sunset. The text is centered within a white rectangular frame.
